While you're Android, sometimes you get problems like Wi-Fi is not the connection or signal falling. It's really something for everyone because today everyone is connected via the Internet. A smartphone is like a lifeguard in the palm of your hand when and wherever you are. So once you get the connection problem, you need to know how to reset the network settings on Android. In this article, we'll show you a simple way to do it. The reason you need to reset network settings on Android isn't just because of a Wi-Fi connection failure. All the things that are related to the Internet are about Network. Symptoms could be seen when you are stuck in the middle of the download, error in the GPS direction, can not receive an email, social media will not show you its page, and much more. It could take your time. But don't worry, once you know how to solve it, network conflict would be a piece of cake. Steps to fix your connection by reset network settings Now sit down and get your phone. Follow the steps below to reset network settings on Android. In fact, each phone has a different setting or troubleshooting methods. But, if your problems are Bluetooth devices, Wi-Fi connection, or mobile data network, there are commonly used in every brand. Keep in mind that once you've reset the setting, you may lose your custom settings and information before. Your phone will be back to its default setting. 1. Swipe your phone The first thing to do is swipe your phone and find the setting icon. Sometimes people customize placement icons. They usually put in a folder, but others let it appear on the page. 2. Open settings Once you find the settings app, you can open it. If you are confused, just look at the gear icon. Usually, each brand uses this image as a setting app icon. Tap the icon to find the menu to reset network settings on Android. Another possibility for which you can't find the speed icon is because of your theme. If you use a theme, usually the creator has made a special icon for the setting. You need to read each icon until you find the setting app. 3. Choose Menu backup and reset Press the setting icon to open the app. Then you have to scroll down to find Save and Reset menu. Press this button and you will be directed to a new page. 4. Choose to reset the network setting button Your next step is to find the button to reset the network settings on Android. Scroll down until you see the Network Settings Resets option. If you can't find the reset network settings, just look for it on the search button. There is a short explanation in his option. It tells you what types of resets you're going to do. Aware of this information, as it applies to any changes you make, such as Wi-Fi, Bluetooth, and other network settings. As we mentioned earlier, once you do a reset, it all comes down to the default settings. 10 Best Dialer apps for Android5. Press the Reset Button When you press the Reset Network Adjustment button, you'll be directed to the new page. So don't worry if you accidentally save, but want to cancel the reset. In this part, you will again be convinced whether you agree to reset or not. Your phone also notifies the part that is changed to the default setting. If you're sure you want to reset, press the REINITIALIZATION SETTINGS button. 6. Default setting Now you've managed to reset network settings on Android. You can check that all settings have already been created. You won't find any. You need to adjust the default setting before using it again. But if you want to try applying the default setting, it is is Call. Things to Worry When you reset network settings on Android We told you that each phone has a different way of reset network settings. Even if there is a general method, each Android has its concerns. See what we're hearing below: Check data roaming and APN is mandatory. If you have no problem with it, tap the APN menu and click Reset by default. Make sure the mobile data is on once you want to reset the network on Kitkat. To reset the network, you need to find the Data Use button. After that, search for the APN menu and tap to reset. Lollipop Android has more advanced network settings compared to the previous series. On the other hand, it causes more bugs and delays. That's because of new features like HSPA - 3G and LTE. So if you want to reset the network settings, you need to disable the mobile data and then turn it on again. But if that doesn't work, go to the Settings button, click More and find the Cellular Network option. Press the name of the access point and choose the Reset button. Ignore the new APN option. Once you've reset Marshmallow's network settings, the effect will refer to Wi-Fi and Bluetooth. Just like the other method, you switch to the setting menu and click save and reset button. Choose Network Adjustment Reset, then click Adjustment Reset. Once you see the box called RESET PARAMETERS, click on it. To reset the network settings on Android in the Nougat version is quite the same with Marshmallow. But there's a little different on the first step. You don't have to choose the Save and Reset button here, but it's changed in the Wireless and Networks menu. Then you'll find the network setting reset. The warning option appears, click here to reset. These two are the new version of Android. They are now commonly used in the smartphone. But there is no different way to reset the Nougat version. You can follow the steps on the Nougat because the menu and method are exactly the same. These are guides to reset network settings on Android. Hopefully this article relieves your problem with the situation. We also put some kinds of Android because we know that everyone could use different Android version. But if you've been trying for a while and still can't get your Android network fixed, you can contact the nearest service center for help. Help.
